

Erase Signs of Aging with the Stroke of a Pen.

Latest technology now available at Graper Cosmetic Surgery.

Do you ever look in a mirror and wish you could erase the effects of time? Now you can reduce and eliminate many of the characteristics associated with aging skin with Réjuvopen®, a Micro Fractional Collagen Stimulation System™, now available at Graper Cosmetic Surgery.

This non-surgical solution is an effective option for those wanting to reduce fine lines and wrinkles, improve the appearance of scars, acne scars and stretch marks, and reduce pore size.

Réjuvopen is a micro-needling technique using current technology. The electronic pen shaped device utilizes fine needles to penetrate deep beneath the skin's surface to rebuild elasticity and collagen, and reduce the size of pores. Réjuvopen activates cell regeneration and enhances the absorption of Vitamin C and other anti-oxidants that Graper Cosmetic Surgery may recommend for your skin's treatment.

Ultherapy® is another new non-surgical solution Dr. Graper introduced into his practice earlier this year. Ultherapy lifts and tightens skin on face, neck, brow and was recently FDA-cleared for décolleté treatment.

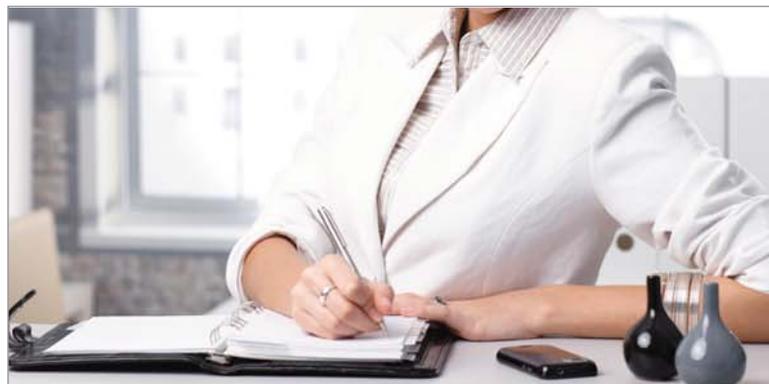

"Micro-needling is a great complement to the non-operative Ultherapy," says Dr. Robert Graper, F.A.C.S. "Micro-needling resurfaces the skin's surface non-operatively while Ultherapy rejuvenates the deeper skin layer non-operatively to tighten the skin. So the result is smoother, tighter skin. Micro-needling addresses the quality of the skin while Ultherapy addresses the quantity of the skin and both are non-operative," continues Dr. Graper.

Réjuvopen treatments generally produce the most effective results after three to six treatments. During the consultation phase, a thorough analysis of your skin's condition is performed and the correct treatment plan is recommended to produce the desired outcome.

"Non-invasive treatments are for those who have early, mild aging changes or for those with more advanced aging who want less downtime, cost and risk," states Dr. Graper.

Réjuvopen treatments can be performed on the face and body and have approximately a 24 to 48 hour recovery time. Individual results may vary. Graper Cosmetic Surgery recommends sun protection around and after treatments.

Dr. Robert Graper hosts free seminars about surgical and non-surgical options at his fully accredited facility located at 2915 Coltsgate Road in SouthPark.
